

Carry Bags, Cases & Totes

Carry Bags, Cases & Totes

Strap Belt & Press Stud System

Strap Belt System

Special shoulder strap with quick release buckles on each end can be easily detached from Makita Blue Collection II tool cases, tool bag or chair tool bag. The system can also be worn on the waist as a light duty tool belt to attach tool holders, pouches & other leatherwear

Press Stud System

Two metal buttons on each side allows the user to attach the drawstring pouch and tool organiser to the universal pouch or tool bags from the Makita Blue Collection II

Technical Information

	Made in EU. All the products from the Leatherwear Collection have been designed and produced in Europe. This brings top quality and very short delivery time in order to meet customers needs.
	Polyester 600D. 600 denier polyester material. This fabric is the most widely used fabric in the world. Proven for durability, it is lightweight, puncture and tear resistant. This material has been used in many products of the range as a lining in non-heavy wearing areas.
	Polyester 1680D. 1680 denier strong polyester fabric. The very “heavy-duty” version of 600D material. This fabric features much higher density yarns and waves that can withstand daily jobsite pounding. Perfect choice as a leading material for Makita newest top quality Leatherwear Collection.
	Suede leather. Suede leather offers performance at a tremendous value. Suede on both sides, this leather is used for flexibility and comfort. Sturdy enough for the job site, yet practical enough for any job. Designed in a Makita Blue colour, strategically positioned around the edges of pockets and in black on the inside of gear as a perfect protection against damage by fixings or tools.
	High Grade Leather. High Grade leather is smooth on one side and brushed suede on the other. Strong and tough for long life, but soft and supple for comfort. Excellent strength and added abrasion resistance, selected for use in products requiring thick leather for special tool slots. A heavy gauge leather with a thickness of 2.2mm to 2.5mm ensuring top quality.
	3D Air Mesh. Breathable material with small holes to ensure good air circulation. The 3D air mesh on belts and other products are designed to allow the skin to breathe if worn close to the body. This is especially helpful when carrying heavy tools. The soft mesh 3D construction gives the feeling of softness.
	Stainless Steel. Parts made from stainless steel does not stain, corrode or rust as easily as ordinary steel. The surface finish is an essential part of the look and functionality of a stainless steel structure. Stainless steel used in our products provides years of protection against damage and rust. It is also extremely strong in appearance which suits the high quality standard of Makita’s new range.
	Strong Rivets. Riveted for truly unbreakable strength. Edges or parts of the leatherwear that are prone to extra damage are reinforced with capped design, one-piece self-punching rivets.
	Swinging Holder. Stainless steel metal hammer holder swings to keep your hammer at a comfortable angle. The swinging mechanism keeps the hammer upright to whatever working position you find yourself in. Fixed by rivets in most ergonomically positions gives extra advantage comparing to traditional solutions.
	Side Gate Holder. New solution side gate hammer holder lets you easily put the tool in without looking at the holder. Snapper Hammer Holder has the highly useful “no look” snap-in action possibilities thanks to spring loaded snappers which allow convenient hammer entry.
	Tape Clip. Measuring tape clip holds any common builder’s tape measure from 3-10 meters. Made from Stainless Steel. The most convenient solution for carrying measuring tapes.
	Tape Chain. Chain stopper bar is 13.5 cm long which provides easy access to insulation tapes or flex tapes. Designed to carry one or more electrical tapes. Chain can also be used to hold any other product that has an inner core short enough to be threaded through with the stopper bar.
	Quick Release. Easy to open polypropylene quick release buckles. Smooth latch designed to prevent unintentional release with a curved profile for a better fit. Can be found on products that require quick release and easy adjustment. The ability of one-handed release by the operator makes it incredibly functional.
	Carry Handle. Carry handles provide easy carrying without putting it on a belt or shoulder. The Makita collection provides different carry handles ranging from rubber and plastic to top quality handles made of suede leather in the Makita blue colour. Carry handles are also ergonomically shaped for extra comfort.
